nor are they at all exhaustive. some of the elementary topics which would be covered by a more complete guide are: **introduction to differential equations - bard college** - introduction to differential equations 5 a few minutes of thought reveals the answer: more generally, the solution to any $y'' = ce^{2x}$ equation of the form $y'' = ky$ (where k is a constant) is $y = ce^{kx}$. so this is the general solution to the given equation. **introduction to differential topology - people** - introduction to differential topology joel w. robbin uw madison dietmar a. salamon eth zurich h 14 august 2018. ii. preface these are notes for the lecture course "differential geometry ii" held by the second author at eth zurich h in the spring semester of 2018. a prerequisite **differential geometry: a first course in curves and surfaces** - 2. an introduction to hyperbolic geometry 91 3. surface theory with differential forms 101 4. calculus of variations and surfaces of constant mean curvature 107 appendix. review of linear algebra and calculus . . . 114 1. linear algebra review 114 2. calculus review 116 3. differential equations 118 solutions to selected exercises 121
